

The first step with acrylic paints is to be sure they are thoroughly mixed by shaking the paints within the bottle. This step is so important that AMMO is now adding a small metal ball into every bottle to aid in the mixing process. (Found in the Yellow Cap Bottles)

AIR PRESSURE AND AIRBRUSHING DISTANCE

Recommended air pressure is between 20 psi for base coats and 17 psi for details. The recommended distance of the airbrush nozzle to the surface is approximately 10 cm (4" inches) for an overall spray. The nozzle must move closer to the surface when applying fine lines and details.

Anyway we recommend experimenting with Air Pressure and Distance on a piece of material to find what settings works best for the required work.

PRIMING UNTREATED PLASTIC:

We recommend that you always primer before anything else. Primers have a matte finish, providing an ideal surface for the paints to adhere thus increasing their durability. Keep in mind that the purpose of primer is to prepare the surfaces for paint, so light coverage is preferred to a thick coat which can obscure surface details.

When applying the primer it is very important to apply in layers. The first layer is just a VERY light spray, just enough to tint the surface. Allow this first layer to completely dry before continuing with a second layer of primer. This first layer breaks the surface tension that develops between the untreated plastic surface and the water based paints, but to do this it must be applied in thin layers.

Another important reason to use a good primer is many models are constructed using different materials; plastic, resin, photo etch, string, foils, etc. Primers are especially necessary in these instances to unify all surfaces for the decorative paints.

AIRBRUSHING ACRYLIC PAINTS

As with the primer, the better technique is work layer by layer to achieve full coverage, letting dry between layers. This way we will obtain a perfect uniform and smooth surface. AMMO paints are designed to work perfect with the AMMO weathering products.

AMMO acrylics can be used straight from the jar. If needed, they can be diluted with a few drops of A.Mig 2000 Acrylic Thinner.

In the "old" days, primer came to us in one color- grey. But no more! Now primers are available in a variety of colors which is very helpful in that not only can we get good surface preparation, but we can also begin the painting process by laying foundation colors that will complement our final finish.

NEW JARS YELLOW CAPS STAINLESS STIRRING BALLS

Shake & Paint!

From now on, all new colors with yellow cap containing a ball to improve agitation, for the same price.

*Your colors
always flow*

We also want to announce that we continue to improve our products through constant innovation. This time we are the first brand to include an agitator in our acrylic paints. This industry leading innovation allows for quick and convenient color mixture, even and consistent every time. These exciting new products are easily distinguishable by their new yellow cap. Each jar includes a stainless steel agitator to facilitate mixture.
